

Battlezoo Ancestries: Year of Legends Pathbuilder 2e Install Guide

This guide shows how you can install the custom character traits into Pathbuilder 2e. This guide covers the web version of Pathbuilder 2e, but the Android Mobile Character Builder should work in the same way. If you have any questions or need help understanding this process, head on over the Roll For Combat Discord channel for help at <https://discord.rollforcombat.com/>.

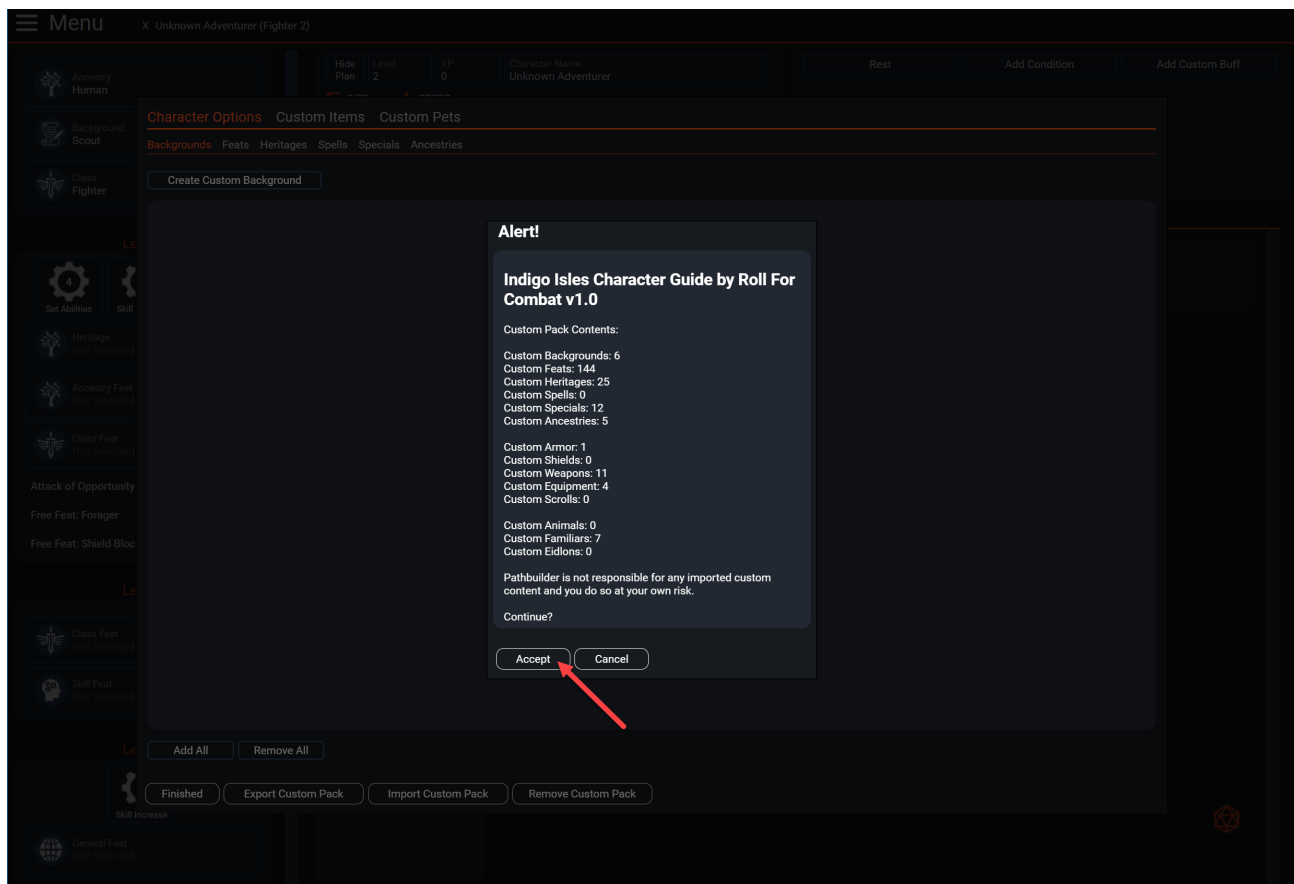

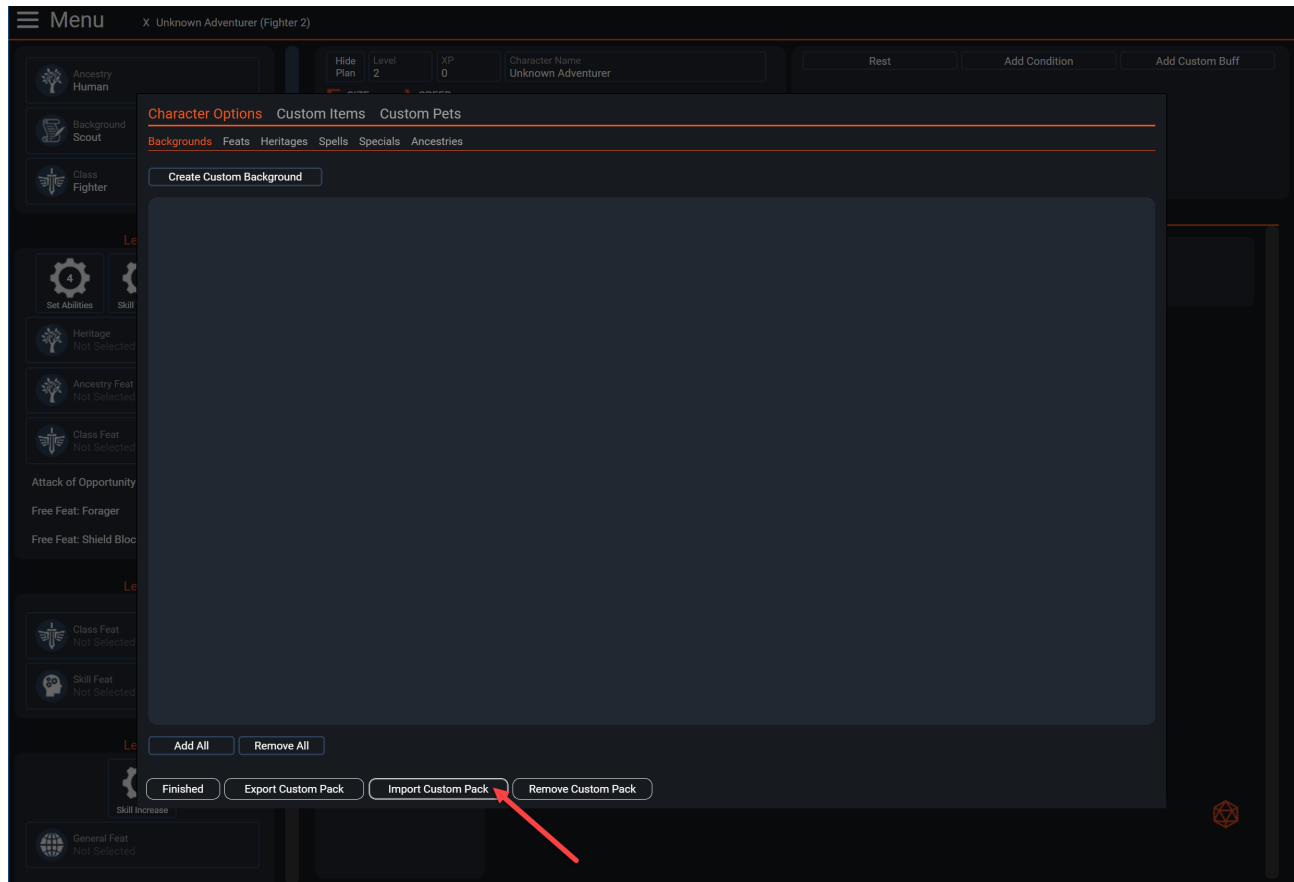

First, navigate to <https://pathbuilder2e.com/> and select the “Web Character Builder” button

After you start Pathbuilder 2e you will need to install a custom pack to use the new Ancestries. To this go the menu and select Custom Pack:

From here you can install the custom packs. Select “Import Custom Pack” and select the JSON file you wish to import.

After the custom pack is installed, you will need to manually add these items to Pathbuilder 2e. Select the items you wish to install. Select “Finished” when done and enjoy the custom Battlezoo content!
